

STERILIZATION CONTAINERS AND ACCESSORIES

Product Catalogue

quality & trust

aysam.com.tr

Our vision is to become one of the leading medical device manufacturers in the world by adopting the understanding of “continuous improvement” and “quality is in detail” with sustainable growth in the production of orthopaedic implants, orthopaedic surgical instrument sets, surgical instruments, sterilization containers, perforated sheet baskets, orthopaedics instrument containers, arthroplasty product and other medical devices.

Aysam Orthopaedics and Medical Devices Company has documented this vision with **ISO 9001**, **ISO 13485**, and **CE** certificates.

Aysam serves over **80 countries** around the world. We also serve as an OEM supplier to many international companies.

Our main objective to achieve these goals is to bring innovation and quality together with trust.

Aysam, which has been producing sterile container systems for **20 years**, also produces sheet baskets and other accessories for containers and offers them to the service of the medical community. With its young, dynamic, and expert staff, Aysam makes more innovative designs and applications for different types of sterile containers and accessories.

In order to respond to the demands of the customers faster and with higher quality, Aysam educates and informs its staff at an advanced level and aims to ensure the continuity of customer, patient, and physician satisfaction under all conditions. Aysam increases both individual and corporate quality with continuous and up-to-date training & information.

The results of scientific studies performed with Aysam Medical Devices are published in prestigious journals. Aysam continues its development following the requirements of the age with its service understanding that does not compromise on patient health, customer satisfaction, and quality, and its open structure to innovations.

AYSAM STERILE CONTAINER COMPONENTS

- Aysam Sterilization Container Systems are reusable and anodized containers used to sterilize implants, surgical instruments and textiles, and keep and carry them as sterile.
- Aysam Sterilization Container Systems are designed for daily use and years of use.
- Therefore, when choosing sterilization container systems, make sure that the container and instruments comply with the application and sterilization requirements.
- Aysam Sterilization Containers are made of EN AW 1050 quality aluminum and AISI 304 stainless steel (EN 1.4301) following territorial and international standards.
- Due to the large number of aluminum parts in the design, handling and transporting are easier.
- Anodization has been applied to the lids, bottom, and other aluminum components of the Sterile Containers to increase its resistance against external factors and to gain a decorative appearance.
- Aysam Sterile Container Systems are packaged and shipped as non-sterile.
- Aysam Sterile Containers are suitable for steam and ethylene oxide sterilization.

Removing and attaching the filter holder and changing the filter.

1. LID

- Aysam Sterilization Container Systems, there are holes for air passage on the outer surface of the lid.
- There is a silicone gasket on the inner surface of the lid, providing air and waterproof along the edge.
- In the middle of the lid, there is a lockable filter retainer, that holds the filters tightly and has a sealing gasket on the top (center and peripheral parts), made of stainless steel or plastic.
- There are spring latches on both sides of the lid that provide locking by springing into the bottom.
- The silicones in the lid, filter retainer, and handles are made of materials resistant to hot application in the autoclave.
- Sterilization container lids are produced in six different colors like gray, black, green, red, yellow, and blue. These color differences provide convenience for you in storage

2. BOTTOM

- On both sides of sterilization container bottoms, there are label attachment compartments, handles, and lock parts through which plastic disposable security seal passes.

- Paper labels with indicators are placed in the label attachment compartments of container bottoms for sterilization process and follow-up details.

- In mini, dental, and flat sterilization containers, there are aluminum label placement pieces on the side of the lid, suitable for paper label indicator.

3. ACCESSORIES

- The disposable consumables of the Container Systems are paper, textile, and Teflon filters, plastic security seals, and sterilization indicator labels.

- Paper, textile, and Teflon filters provide effective protection by preventing microorganisms from entering the container after sterilization.

- Paper filters are disposable and should be changed at every sterilization process. Textile filters for 20 uses; Teflon filters are for 2000 uses.

- For the stacking of small, mini, and micro-instruments in the container, it is recommended to use a silicone mat on the floor.

- Sheet/wire baskets of Aysam containers can be cleaned and sterilized following the accepted instructions and using the same procedures as Aysam Sterilization Container bottoms.

BIOBARRIER STERILE CONTAINER

In addition to the features of Basic (Filtered) Sterile Container, in [Aysam Biobarrier Containers](#);

- There are one or two mechanical biobarrier valves with silicone seals on the lid.
- Biobarrier valves operate by opening/closing with the air pressure generated in the autoclave during sterilization.

Thanks to the biobarrier system and the silicon gaskets used in it, the air is removed from the container during sterilization, the pressurized hot water steam enters the container through the biobarrier valves, and finally the hot steam is discharged out by the impact of vacuum.

- Biobarrier Sterilization Container Systems are mechanical systems consisting of valves and silicon seals. During the sterilization;

1- In the first stage, the upper valve opens with the effect of negative (-) pressure in the (pre-vacuum) autoclave and thus the air is removed from the container and autoclave (Figure 2).

2- Then, the small valve is opened by pushing down with the effect of positive (+) pressurized hot water vapor (2-3 atm; 134°C) given to the autoclave and hot steam air enters the container (Figure 3).

3- In the last stage, the upper valve of the container is opened again with the effect of negative (-) pressure in the autoclave and the hot steamed air inside is removed from the container and autoclave (Figure 4).

- Besides, since the biobarrier system is closed after sterilization and prevents air entry and exit, container maintains the sterility until it is opened during the surgical procedure.

Aysam, which has been exporting to five continents of the world for twenty years, has been increasing the number of distributors and dealers day by day and advancing confidently towards its goals. Besides, Aysam continues its activities with companies of distributor and dealer in full harmony and loyalty. Aysam participates in national/international fairs and congresses and offers its product groups to the service of the Medical World. By regularly participating in the world's largest and most prestigious fairs such as Medica/Düsseldorf, Arab Health/Dubai, Expomed/Istanbul as well as other congresses and organizations, it continuously increases its interaction with customers and end-user healthcare professionals. Aysam has adopted the principle of quality, advanced, and innovative production by customer feedback, R&D studies, specialist physicians, dynamic&experienced engineers, and modern infrastructure in accordance with the requirements of the age.

Aysam manufactures medical devices in seven groups: ORTHOPAEDIC implants, arthroplasty products, surgical sets, surgical instruments, perforated sheet baskets, orthopaedic instrument containers and sterilization containers. With new R&D studies, it continues to add new products to its nearly 20 thousand product range. Combining 20 years of knowledge with modern technology, Aysam produces its devices in a more innovative and quality way.
